ECOTAP SOLAR Chargingstation for E-Bikes Type: Z2 & Z4

The Z-Column is ideal for safely charging bicycles, scooters or mobility scooters. The Z-column generates electricity by means of a light panel which is stored in the charging column.

Due to its impressive appearance (4.15 meters high), this charging point is very visible and easy to find for users.

This bicycle charging point does not need an external power connection and is completely self-supporting. In addition, the charging point has current limitation and earth leakage protection with full automatic reset.

Available with 2 or 4 sockets.
