Ecotap Factsheet 2022

You're in charge

We can all contribute to the climate through smart solutions. Electric driving means cleaner and more economical driving. No particulate matter is emitted and electricity is cheaper than fossil fuels. So the choice is yours, because "you're in charge". At Ecotap, we are committed to making that choice as easy as possible for you. We do this by continuously innovating: better and even more beautiful charging points. In doing so, we use maximum willpower, including through our "jump-out forces". These are colleagues who, for whatever reason, previously had difficulty entering the labor market successfully. Team members who prove their unprecedented value every day with above-average commitment. Because at Ecotap, everyone who wants to stand out in one way or another is "in charge".

Welcome to Ecotap.

Ahead with you

Driving an electric car, transporting people or goods with electric buses or trucks? Ecotap deploys the latest techniques and designs for you to

achieve the very best; faster, smarter, more innovative, more beautiful and more sustainable. That makes you and us frontrunners, because with an Ecotap charging point you always have the most innovative available. All our 63 team members are committed to this every day, with knowledge, expertise and passion.

Typical Ecotap.

Together Ecotap

At Ecotap we believe in an inclusive society. Everyone has talent, everyone is special and everyone participates. By empowering people, unprecedented amounts can be achieved. Together we make Ecotap special. This is special for you, because we keep focus on your interests: getting everything possible out of your charge point. To this end, we have team members within the departments of development & engineering, purchasing & assembly, quality control, transport & assembly, communication and sales.

Together we're Ecotap.
